

Business Performance Analysis – Task 2

1. Which region generated the highest revenue?

Answer: The **West** region generated the highest revenue among all regions. This indicates strong customer demand and better sales performance in that region.

2. Which product category has the highest profit margin?

Answer: The **Technology** category achieved the highest profit margin, making it the most profitable category in the dataset.

3. How does discount impact profitability?

Answer: Higher discounts generally reduce profit margins. Moderate discounts can improve sales, but excessive discounts negatively affect overall profitability.

4. Which customer segment is the most valuable?

Answer: The **Consumer** segment contributed the highest share of sales and revenue, making it the most valuable customer segment.

5. What seasonal trends can be observed?

Answer: Sales varied throughout the year, with higher sales in some months and lower sales in others. This indicates seasonal demand, suggesting that promotional campaigns should be planned during low-sales periods.

Business Summary Report

Task 2: Sales Performance Analysis using SQL, Excel and Power BI

Objective

The objective of this project was to analyze sales performance by combining customer and order data using SQL, Excel, and Power BI. The goal was to identify business trends, customer behavior, regional performance, and profitability.

Tools Used

- Microsoft Excel
- MySQL
- Power BI
- SQL

Key Business Insights

1. Regional Performance

The **West** region recorded the highest sales revenue, while other regions showed comparatively lower performance. This suggests that marketing and inventory planning should continue focusing on high-performing regions.

2. Product Profitability

The **Technology** category generated the highest profit margin, making it the strongest product category for business growth.

3. Customer Analysis

The **Consumer** segment contributed the largest portion of total sales. Building customer loyalty programs for this segment can increase long-term revenue.

4. Discount Analysis

Higher discounts reduced profitability in many cases. A balanced discount strategy is recommended to maintain both sales volume and profit margins.

5. Sales Trend

Sales changed across different months, indicating seasonal buying patterns. Businesses should plan promotional offers during slower months and increase stock before high-demand periods.

Recommendations

- Focus marketing campaigns on the **West** region.
- Increase investment in **Technology** products.
- Optimize discount policies to improve profit margins.

Business Summary Report

Task 2: Sales Performance Analysis using SQL, Excel and Power BI

- Strengthen loyalty programs for **Consumer** customers.
- Plan inventory based on monthly sales trends.

Conclusion

This project successfully combined **SQL**, **Excel**, and **Power BI** to perform end-to-end business analysis. Interactive dashboards and SQL analysis helped identify key performance indicators, customer trends, and profitable business opportunities. These insights can support better business decisions and improve overall organizational performance.
